

DEKO FG Nature

Fully glazed partition with slim hardwood profiles

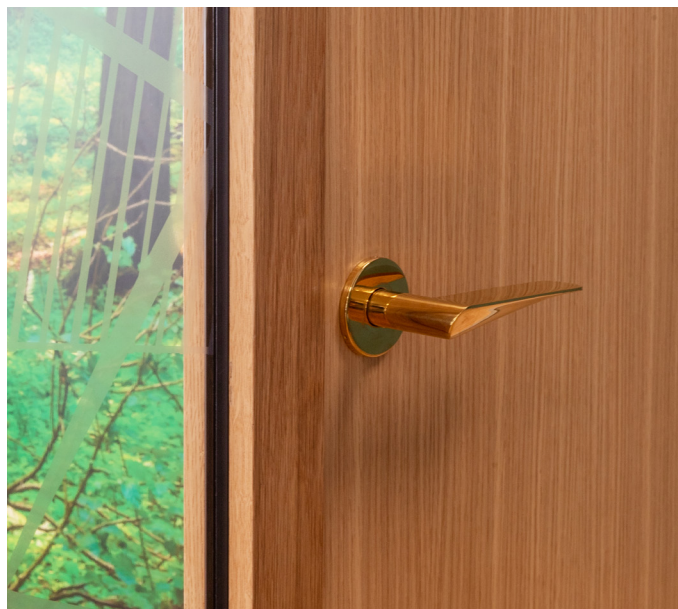

Fully glazed partition in minimal wooden design

DEKO FG Nature is a fully glazed partition with hardwood profiles and matching wooden door frames. The partition consists of 1-layer of full-height glazed panels, finished with hardwood profiles where the glass meets the adjacent building elements. All visible profiles come as standard in oak with a varnished surface, but are also available in other types of wood.

The joint between the glazed panels features a 3mm silicone strip, providing a stable, soundproof partition with a prefabricated, clear and almost invisible joint.

The DEKO FG Nature glazed partition provides a sound reduction of up to 42 dB depending on the built-in glass type. The partition can incorporate many different types of doors in a variety of sound classifications, designs and formats.

The DEKO FG Nature fully glazed partition offers a flexible solution with an exclusive wooden design, which can be customised to suit specific wishes and requirements.
